
Issues

Does your user access certification take weeks instead of days?

Do your application security groups fall out of date as employees move or get promoted?

Are your sensitive email distribution lists kept current?

Solutions

COMPLIANCE™ AUDITOR

Minimizes Audits

Routinely
Validates Roles and Access

Can you certify that every user's access to systems and assets are correct for their role? Now you can! Compliance Auditor identifies the gaps in your organization compliance regarding user access, let's you immediately correct them, or even use segregation of duties (SOD) rules to prevent them.

Compliance Auditor has an easy-to-use interface that allows asset and entitlement owners to quickly validate, revoke or remove access, allow exceptions, or escalate.

Compliance Auditor also converts complex and hard to understand access data into actionable knowledge. It streamlines your periodic audits by creating a detailed record of access certification, and provides insightful reports that you can use to simplify and improve your compliance processes.

With Compliance Auditor, the access that you certify really is the access your users have.

GROUP™ ENFORCER

Assures Membership

Business
Controls for Groups

Groups and distribution lists are only useful if the right people are on them, and the wrong people are not. Avatier Group Enforcer automatically maintains application security groups and email distribution lists, based on business rules.

Group Enforcer provides a simple web wizard interface to create and manage group enforcement rules. It then applies these business rules to data in your HR system, Microsoft Active Directory, LDAP or web service -- extracting matching members into the correct groups.

With Group Enforcer, your groups and distribution lists will never fall out of date. As your source system is updated, Group Enforcer's rules update your groups with new members and remove outdated or unauthorized ones.

Let Group Enforcer manage your group membership, so you don't have to.
